E05 Composable harness foundry

Evolution / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Construct and evolve reusable harness components.

OBJECT INTERACTION

POINTCUT / PATTERN INTERFACE	
CONTEXT	Harness behavior is assembled from independently typed components.
TRIGGER	Components are selected, composed, or replaced.
STRUCTURE	Component interface, composition builder, evaluator, and artifact registry.
EFFECT	The built harness is executable and its component provenance is recoverable.

CONTRACT / REQUIRED BEHAVIOR	
REQUIRES	Components have compatible contracts and composition operators.
ENSURES	Invalid composition is rejected before execution.
INVARIANT	Reusing a component does not silently reuse privileged state.
VIOLATION	Build conflicts, incompatible versions, and evaluation failure are explicit.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
