E06 Joint harness-policy evolution

Evolution / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Adapt runtime structure and policy together.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	Runtime harness and model policy can both change.
TRIGGER	An evolution round evaluates task behavior and proposes changes to either or both.
STRUCTURE	Task interface, harness representation, policy representation, and joint evaluator.
EFFECT	The selected pair is evaluated as a pair with attribution for harness and policy changes.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Policy and harness variants are versioned jointly.
ENSURES	Results identify the evaluated pair and separate objective contributions where possible.
INVARIANT	A policy gain is not reported as a harness gain without an ablation.
VIOLATION	Failed candidates or incompatible pairs are excluded with reason.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
