E08 On-demand adaptation target selection

Evolution / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Choose harness versus weight adaptation.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	An embodied agent encounters a task or distribution shift.
TRIGGER	An adaptation controller evaluates task performance and cost.
STRUCTURE	Adaptation target policy, harness and weight candidates, and evaluation feedback.
EFFECT	The controller selects a declared adaptation target and records why.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Task state, candidate adaptation targets, and cost or risk are observable.
ENSURES	The selected target is compatible with the current execution environment.
INVARIANT	Adaptation does not silently combine targets outside the declared policy.
VIOLATION	Unsupported target or uncertain evidence falls back to a safe target or no adaptation.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
