E10 Observability-driven harness evolution

Evolution / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Use traces to guide candidate changes.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE	
CONTEXT	Harness traces and evaluation results are available for improvement.
TRIGGER	Analysis identifies a failure or opportunity and proposes a harness change.
STRUCTURE	Trace schema, analyzer, authorized edit scope, evaluation gate, and regression suite.
EFFECT	The harness change is trace-linked and accepted only after evaluation.

CONTRACT / REQUIRED BEHAVIOR	
REQUIRES	Trace links compare runs and identify the affected harness component.
ENSURES	Accepted changes retain observation, hypothesis, diff, and evaluation provenance.
INVARIANT	A changed harness still passes regression and security checks.
VIOLATION	Non-reproducible traces or regressions reject or quarantine the change.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
