P01 Minimal linear loop

Primitive / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Alternate model turns and action execution.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	A harness executes an agent with at least one model or action turn.
TRIGGER	A model response requests tools or another turn.
STRUCTURE	Ordered turn/result records and an explicit repeat-or-terminate decision.
EFFECT	Every turn yields a terminal result, a tool action, or another legal turn.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Model output, action dispatch, and a termination predicate are available.
ENSURES	Actions are correlated with their turn and a terminal outcome is returned.
INVARIANT	Each completed turn has one recorded decision and no unexplained action.
VIOLATION	Premature stop, malformed action, or repeated retry must terminate or surface an error.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
