P10 Capped output and remediation errors

Primitive / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Bound observations while enabling recovery.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE	
CONTEXT	A tool or environment can emit output larger than the context allowance.
TRIGGER	Output crosses a size or token cap.
STRUCTURE	Limit policy, truncation metadata, and access to complete artifacts.
EFFECT	The harness returns a bounded observation with explicit recovery information.

CONTRACT / REQUIRED BEHAVIOR	
REQUIRES	Output size is measurable and original content remains addressable.
ENSURES	The consumer knows truncation occurred and can seek the full result.
INVARIANT	Truncation never masquerades as complete evidence.
VIOLATION	Oversized or unavailable output returns a typed remediation error.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
