P15 Declarative skills

Primitive / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Package reusable task procedures.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	A harness can load task procedures from repository or user artifacts.
TRIGGER	A skill is discovered, selected, or invoked.
STRUCTURE	Manifest or skill file, provenance, resource bundle, loader, and execution boundary.
EFFECT	Instructions and resources become available with visible source and authority.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Skill identity and source location are discoverable.
ENSURES	Loaded content is scoped to a run and stale or conflicting versions are detectable.
INVARIANT	Skill metadata cannot silently grant permissions or replace protected instructions.
VIOLATION	Missing, malformed, stale, or unauthorized skills fail explicitly.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
