P21 Syntax-aware command permissioning

Primitive / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Inspect command structure before execution.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	An agent proposes a shell command with security-relevant structure.
TRIGGER	The command is about to be parsed, classified, or executed.
STRUCTURE	Shell parser, normalized command tree, policy evaluator, and execution handoff.
EFFECT	Authorization uses parsed operations and a parse failure cannot fall through to execution.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	The command is representable by a parser or rejected before execution.
ENSURES	Every subcommand and redirection is covered by a policy decision.
INVARIANT	Parsed intent and executed command refer to the same normalized operation.
VIOLATION	Unsupported syntax fails closed or requests explicit review.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
