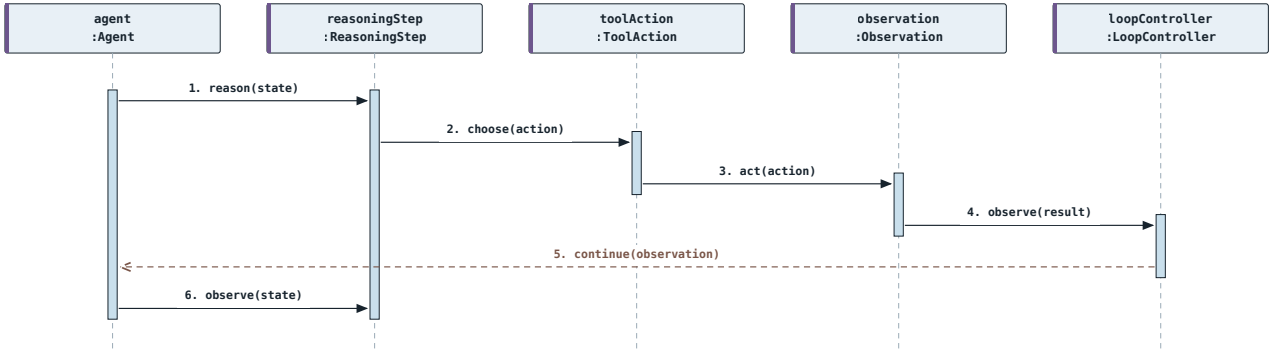
R01 Reason-act-observe

Reasoning / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Interleave reasoning and external actions.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace



POINTCUT / PATTERN INTERFACE

CONTEXT	An agent can reason and use an external action interface.
TRIGGER	The model emits reasoning followed by an action request.
STRUCTURE	Parsed action, execution result, and observation fed into the next cycle.
EFFECT	External evidence enters the reasoning trajectory before the next action.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Action and observation schemas are stable enough to parse.
ENSURES	Every executed action has an attributable observation or execution error.
INVARIANT	Model reasoning is not treated as environment evidence.
VIOLATION	Invalid action, unavailable tool, or parse error is exposed to the loop.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
