W01 Prompt chaining

Workflow / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Pass intermediate results through planned stages.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	A task is decomposed into ordered agent or prompt stages.
TRIGGER	One stage produces an intermediate result consumed by the next.
STRUCTURE	Stage graph, typed handoff payload, validation, and terminal output.
EFFECT	Stages execute in order and downstream input is attributable to upstream output.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Stage order and handoff schema are defined.
ENSURES	Every stage receives validated input and the final output identifies its stage lineage.
INVARIANT	A later stage cannot execute before its prerequisites complete.
VIOLATION	A stage failure stops, retries, or branches according to declared policy.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
