W07 Decentralized handoffs

Workflow / OBJECT INTERACTION / ANALYTICAL COLLABORATION

Transfer control to another specialized agent.

OBJECT INTERACTION

solid arrow: call/message · dashed open arrow: return/failure · analytical order, not an observed trace

POINTCUT / PATTERN INTERFACE

CONTEXT	Multiple peer agents can transfer control.
TRIGGER	The active agent invokes a handoff target.
STRUCTURE	Control-transfer envelope, state policy, target criteria, and authority boundary.
EFFECT	The target becomes active with declared history and no implicit privilege expansion.

CONTRACT / REQUIRED BEHAVIOR

REQUIRES	Target identity and transfer trigger are explicit.
ENSURES	Handoff records source, target, and transferred state.
INVARIANT	Control cannot cycle indefinitely or return to an invalid target.
VIOLATION	Unknown targets, disabled handoffs, and loops have defined outcomes.

Sources: protocol/pattern_diagram_models.yaml (participants + messages); protocol/harness_pattern_specification.yaml (pointcut + contract).

Analytical collaboration only; no repository execution or message order is asserted.
